

06 DRAINAGE PUMP MASTONE PLUS

Features:

Excellent Draining Capability: Rotor is designed to give sufficient torque for greater ability to expel water and to allow greater height of discharge.

Low Sound Level: Low velocity motor means low sound level. A unique vibration-suction suspension system and high quality ball bearing on the motor further reduces the operating sound level.

Long Lifetime: The ball bearing inductive motor has a long lifetime of 20,000 hours.

No Blocked Tube: The large rotor radius generates high torque to expel the condensate water easily, thus no more problems with blocked tubes. The unique dual-face rotary design with the extra large inlet hole (Ø 15mm) can expel contaminants aggregated at the bottom of container easily.

Safety Feature: All plastic material used is made of fire retardant ABS material with UL94 V-O standard. Circuit is protected by a temperature fuse. Thermal protector to cut off automatically when there is abnormal temperature rise.

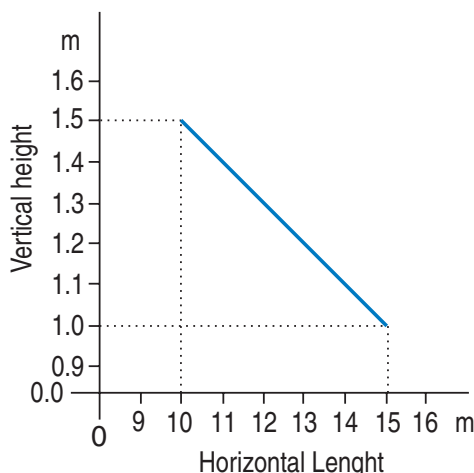

Unique Flow Switch Design (patent-pending): The pump operates with the light detecting flow switch. Unlike many other pumps in the market, this solves the problem of usual metal rod sensor which may become rusty and insensitive after prolong use.

Aesthetic Appearance: The compact Mastone Plus water drainage pump unit blends in easily with the indoor unit and any household interior.

Noise Reduction System (patent-pending): Recognising that noise is a concern to users, a unique vibration-suction suspension system is designed to further reduce the motor noise level.

AS 06 803

Num	Item	MASTONE PLUS
1	Power Rating	220V 50 Hz
2	Power Consumption	23 W
3	Max. Height of Discharge	3,5 meters
4	Water Discharge Capacity	60 liters/h
5	Tank volume	550 cc
6	Blockage Risk	Never gets blocked
7	Sound Level	40 dB
8	Motor	Induction Motor
		Oil impregnated bearing
		300 RPM
		High torsion
9	Weight	1,6 Kg
	Dimensions	180 x 150 x 105 mm
