

14 REMOTE CONTROL VIA SMS

DOMO-GSM

Remote control via mobile phone with 5 inlets and 4 outlets for GSM network

By using the Domo-GSM device, it is possible to know the ambient temperature of the place where the probe is located as well as to set alarms.

If the temperature rises above or drops below the set temperature, you will receive a text message (SMS), so you can decide whether you want to activate the different relays.

You will also receive a text message warning you if the contacts have been closed or in the case of power failure.

Works with a 12V battery.

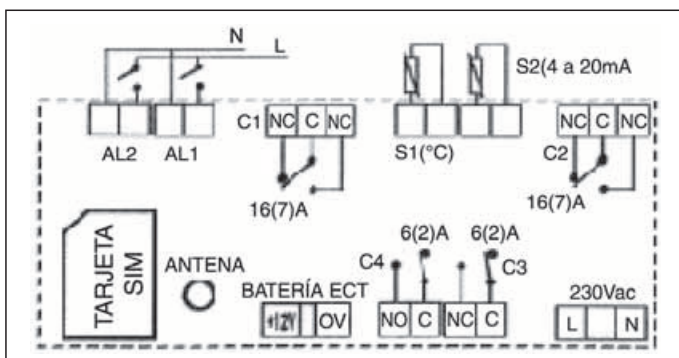

5 INLETS:

- 1x for the temperature probe (-40°C to 140°C)
- 1 x for the 4-20mA probe (e.g. humidity) (S2)
- 2 x opto-isolated 230Vac inlets (AL-1 and AL-2)
- 1 x for external battery connection +12V (can be programmed in case of power failure)

4 OUTLETS:

- 2 x 16(7)A relays, terminals 1 and 2
- 2 x 6(2)A relays, terminals 3 and 4
- Frontal push-button to manually activate or deactivate the relays
- SIM card holder and antenna with magnetic base included (**DOES NOT INCLUDE SIM CARD**)
- Temperature probe included
