

## 01 EVAPORATIVE AIR HUMIDIFIER AND PURIFIER

### Mod. HTF-60

This device helps to moderately raise and keep the humidity level in a room. A fan sucks in the dry room air and blows it over a fabric wick which is kept wet. Thus the passing air is simultaneously purified and humidified before being blown out again into the room. The evaporative air humidifier HTF-60 provides an ideal room climate not only for your personal wellbeing, but also for the conservation of furniture and other valuable objects.

#### MAXIMUM OUTPUT

- For comfort conditions: 500 m<sup>3</sup>/h
- For working conditions: 300 m<sup>3</sup>/h

Code:  
HU 01 331

#### TECHNICAL SPECIFICATIONS

| MODEL                         | HTF-60                      |
|-------------------------------|-----------------------------|
| Voltage supply                | 230 V – 50Hz                |
| Power                         | 53 W                        |
| Air flow                      | 350/800 m <sup>3</sup> /h   |
| Air filtration                | Yes                         |
| Humidification at 21°C 30% RH | 2,5 l/h                     |
| Noise level                   | 29/42 dBA at 1 metre        |
| Tank capacity                 | 34 litres                   |
| Fan speed levels              | 2                           |
| Regulation by hygostat        | Yes                         |
| Casters                       | 4                           |
| Adjustable air outlet         | Yes                         |
| Connection                    | Electric cable 2m with plug |
| Colour                        | Grey anthracite             |
| Weight                        | 18,8 kg                     |
| Dimensions L x H x D          | 720 x 625 x 316 mm          |
